DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

- A person shall be entitled to a patent unless -
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- Claims 1-3, 6-16, and 18 stand rejected under 35 U.S.C. §102(b) as being anticipated by Lugo (US 6,287,252, hereinafter "Lugo"). Lugo is considered to disclose:

a portable electrocardiograph comprising a stacked-layer circuit board (see col. 5, In. 1-3 and fig. 2, Lugo). The disclosed circuit configuration is considered to anticipate the claimed stacked-layer circuit board because both are configured to allow for advantageous arrangement of the electrocardiogram measurement device. In this connection, Lugo discloses a portable communications module that anticipates the claimed portable electrocardiograph (see col. 2, In. 35-42, Lugo);

an electrocardiogram measurement device that measures an electrocardiogram to obtain electrocardiogram data (see col. 1, ln 45-60, Lugo). The disclosed apparatus for monitoring physiological data is considered to anticipate the claimed electrocardiogram measurement device because both obtain data generated by the patient as it relates to his/her heart disease;

a radio communication device that radio-transmits the electrocardiogram data obtained by said electrocardiogram measurement device in real time (see col. 2, ln. 35-53, Lugo). The disclosed receiver is considered to anticipate the claimed radio

communication device because both radio-transmit the electrocardiogram data obtained by the electrocardiogram measurement device;

Page 3

a stacked-layer circuit board including a plurality of circuit boards and a ground conductor layer provided between any ones of said plurality of circuit boards (*see* col. 38-42, Lugo). The disclosed detector is considered to anticipate the claimed device because both allow the electrocardiogram measurement device to accurately measure an electrocardiogram based on the faint voltage generated in a body without being affected by the radio waves emitted from the radio communication device.

With reference to claims 8 and 18, Lugo is considered to disclose a computer that receives the electrocardiogram data transmitted from said portable electrocardiograph and has a display unit that displays the received electrocardiogram data (see col. 9, In. 15-23, Lugo). The disclosed central monitoring station is considered to anticipate the claimed computer because both devices are capable of receiving physiological data.

Referring to claims 2-3 and 9, Lugo is considered to disclose a casing for the electrogram device, radio communication, and circuit board (see col. 9, ln. 30-35, Lugo). The disclosed housing is considered to anticipate the claimed casing because both contain the components of the device, which subsequently allow for the portability.

Claims 6-7 are also rejected under 35 U.S.C. §102(b) as being anticipated by Lugo. Lugo is considered to disclose the alarm sound output device (see col. 2, ln. 43-45, Lugo). The disclosed sensors are considered to anticipate the claimed device that

Art Unit: 3762

receives alarm signals because both are capable of receiving and generating alarms and transmitting to the radio communication device.

With reference to claims 10-16, Lugo is considered to disclose the use of a network for transmitting electrocardiogram data (see col. 8, In. 31-35, Lugo). The use of the disclosed network is considered to anticipate the claimed use of both private and public networks because both server to transmit electrocardiogram data.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 4, 5, and 17 stand rejected under 35 U.S.C. §103(a) as being unpatentable over Lugo in view of Raymond (US 6,282,441, hereinafter "Raymond"). Lugo is considered to disclose the claimed invention as discussed above, under the anticipatory rejection, except for the claimed accelerometer for measuring the acceleration data. However, Raymond discloses the claimed accelerometer (see col. 7, In. 54-60, Raymond). It

Application/Control Number: 10/695,442

Art Unit: 3762

would have been obvious to one of ordinary skill in the art to combine the teachings of

Lugo with the accelerometer teaching found in Raymond for the purpose of measuring

acceleration to obtain acceleration data.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Dana D. Greene whose telephone number is (571) 272-

7138. The examiner can normally be reached on M-F 9-6.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Angela Sykes can be reached on (571) 272-4955. The fax phone number

for the organization where this application or proceeding is assigned is (571) 273-0276.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
